DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Timmermans (U.S. Patent Application Publication number US 2002/0060526 A1).

Regarding claim 1, Timmermans discloses an LED light tube (20) for replacement of a fluorescent light tube, the LED light tube comprising:

- an elongated, cylindrical transparent envelope (24);
- a base cap (26, 28) at each end of the envelope, wherein the base cap comprises a first prong and a second prong extending from the base cap; and
- at least one serial string of LEDS (22) in electrical communication with the base cap having circuitry means (56, 100) for connection with an AC source through a nondissipative voltage dropping element, wherein each one of the at least one serial string of LEDS are connected in parallel with the other and are enclosed in the envelope (Figs. 1-10; page 1, col. 2, lines 28-67, page 2, col. 1, lines 1-35).

Regarding claim 2, Timmermans discloses the LED light tube wherein the at least one serial string of LEDS comprises a plurality of organic light emitting diodes (Figs. 1 and 2).

Regarding claim 3, Timmermans discloses the LED light tube wherein the at least one serial string of LEDS comprises spacedly stacked circuit boards, wherein each one of the circuit boards include a plurality of serially connected LEDS mounted thereon (Figs. 1 and 2).

Regarding claim 4, Timmermans discloses a troffer LED light tube fixture (20) comprising:

a housing comprising a tube holder (24), wherein the tube holder comprises electrical sockets (40) adapted to receive and electrically communicate an LED light tube; and

an LED light tube disposed in the tube holder, wherein the LED light tube comprises an elongated, cylindrical transparent envelope (24), a base cap (26, 28) at each end of the envelope, wherein the base cap comprises a first prong and a second prong extending from the base cap, and at least one serial string of LEDS (22) in electrical communication with the base cap having circuitry means for connection with an AC source through a nondissipative voltage dropping element, wherein each one of the at least one serial string of LEDS are connected in parallel with the other and are enclosed in the envelope (Figs. 1-10; page 1, col. 2, lines 28-67, page 2, col. 1, lines 1-35).

Regarding claim 5, Timmermans discloses the troffer LED light tube fixture wherein the housing further inherently comprises a reflective material disposed on a surface of the housing for maximizing the light output.

Regarding claim 6, Timmermans discloses the troffer LED light tube fixture wherein the at least one serial string of LEDS comprises a plurality of organic light emitting diodes (Figs. 1 and 2).

Allowable Subject Matter

3. Claims 7-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

None of the prior art teaches the troffer LED light tube wherein the means for protection against a voltage surge comprises a varistor positioned in parallel with the at least one serial string of LEDs.
